Slide 10: Testing Methodologies

1. Functional Testing ([redacted])

Verifies that all web components (Textfields, Checkboxes, Buttons) accept inputs and respond according to specifications.

> *VIVA Hint: Website-*[redacted]*.*

2. Data-Driven Testing ([redacted])

Executes the exact same script block multiple times using varied data sets retrieved directly from the external CSV file.

> *VIVA Hint:* [redacted]*.*

3. Regression Testing ([redacted])

Re-runs entire automated scripts test packages to ensure that new code updates do not break existing working functionalities.

> *VIVA Hint:* [redacted]*.*

4. Boundary Value Analysis ([redacted])

Tests data fields with extreme minimum, maximum, and out-of-range limits to evaluate input text boxes robustness.
