Slide 3: Objectives (■■■■■■■■■■■■■■)

The primary objective of this project is to overcome the limitations of manual testing by design and deployment of an automated functional testing framework.

1. Automation of Functional Test Cases

To convert manual, Excel-based test case scenarios into highly efficient, reusable automated scripts using Eclipse IDE and Selenium WebDriver.

> *Tamil Hint: Manual-ah irukkura software test case-galai, Selenium WebDriver matrum Eclipse payanpaduthi thaanaga iyanga (Automate seiya) vaipathu.*

2. Time and Resource Optimization

To drastically minimize the execution cycle time for complex test scenarios and optimize system resource utilization during regression cycles.

> *Tamil Hint: Software-ai test seiya aagum thuninthavariana nethirathaiyum, manitha ulaipaiyum mikavum kuraipathu.*

3. Enhanced Bug Detection Accuracy

To eliminate human oversight and error, ensuring 100% precision in locating broken elements, invalid login pathways, and software regressions.

> *Tamil Hint: Manitha thavarugalal vidupadum softwre bug-galai thuniyamaga kandupidipathu.*

4. Automated Reporting and Analysis

To generate clean, structured console summaries and logs immediately following a test run, helping stakeholders understand pass/fail status instantly.

> *Tamil Hint: Test mudinthavudan test result (Pass/Fail) matrum logs-galai auto-report-aga uruvakkuvathu.*
