Slide 4: Existing vs Proposed System

Feature / Parameter	Existing System (Manual Testing)	Proposed System (Automation)
Execution Speed	Very slow; human execution takes minutes per test case.	Extremely fast; automated scripts run in seconds.
Accuracy & Errors	High risk of missing bugs due to human fatigue or oversight.	100% accurate code verification based on predefined assertions.
Reusability	Zero reusability. Same steps must be manually repeated every run.	High reusability. Scripts run repeatedly across builds.
Data Handling	Manual copy-paste or entry of test data for every scenario.	Data-driven framework reads inputs seamlessly via CSV/Excel.
Reporting	Manual logging in Excel, taking additional effort and time.	Instant generation of console reports and test summaries.

Viva Speaking Guide (Tamil Hints):

1. Existing System Pathi Solla Pothu: Manual testing romba time edukkum, human errors varalaam, reusable illa nu sollunga.
2. Proposed System Pathi Solla Pothu: Selenium + Eclipse automation moolama seconds la check pannidalam, CSV data dynamic ah edukalam nu explain pannunga.
