Slide 6: System Architecture

Component Breakdown & Execution Flow

1. Input Layer (.CSV Data Source)	*Stores parameters, test metrics, and expected results. Feeds directly into the logic loop.* *VIVA Hint: Namma external CSV file-la irukura test cases core loop-fuku input-ah pogum.*
2. Core Engine (Eclipse & Java)	*Parses the external file line-by-line and sequences automation flows dynamically.* *VIVA Hint: Eclipse Core Java code dhaan automation workflow-ah dynamic-ah run pannum.*
3. Execution (Selenium WebDriver)	*Acts as the bridge translating software code commands into native Web Browser actions.* *VIVA Hint: Selenium webdriver command-ah browser elements-la action-ah mathum.*
4. Target Web Application UI	*The UI site elements undergoing stress testing, assertions, and verification metrics.* *VIVA Hint: Namma test panna vendiya web interface, user inputs validation script idhu.*

5. Output Layer (Reports & Logs)	*Captures console exceptions, stacktraces, and prints out full metrics sheets instantly.* *VIVA Hint: Test run mudunjathum final-ah execution status result log console-la print aagum.*
